Product Description

Goldens' Indirect Heat Firebox Divider for 20.5? Cooker

Our cast iron firebox divider plate, for 20.5? kamado cookers, uses reflected heat source to cook your food. Simply place the divider in your firebox and fill lump charcoal on one side. The firebox divider, combined with divider plates of half grates, gives a significant effect. The divider plate offers direct heat on one side, and indirect on the non-charcoal side. It makes a reverse sear very practical, without having to pause and re-configure your grates, searing plate, or lump.
